Persistence and degradability

The polymer in this product is poorly biodegradable. However, it is rapidly eliminated from the aquatic environment by adsorption onto organic particulate matter and sediment.

Mobility

The environmental fate was estimated using a level III fugacity model embedded in the EPI (estimation program interface) Suite TM, provided by the US EPA. The model assumes a steady state condition between the total input and output. The level III model does not require equilibrium between the defined media. The information provided is intended to give the user a general estimate of the environmental fate of this product under the defined conditions of the models.
